EMS Color Scheme Explanation

Our eConference Plus/Enterprise software offers you a variety of tools to effectively manage your Netbriefings events. One tool gives you the ability to create a color scheme for your Netbriefings presentation. For example, you could choose to coordinate your events with the color theme of your website. In addition, you may further tailor the colors scheme of an individual event by selecting ‘Event Preferences’ for a specific event as it is listed on the Modify Event → Advanced screen.

Following are sample Agenda and Viewer pages for a Netbriefings presentation. Color features of the samples are identified and explained in the table that follows.

Agenda Page

---

See the document for the full table and explanations.
You may control the colors identified in these pages, for all features except the Slide Background (9). You will find instructions for specifying the color of slide borders in the document entitled “Slide Tips”. All other features are controlled on the Customer or Event Preferences pages. When you select Other→Preferences on the portal Home page, the following page is displayed. (Note the section entitled “Color Settings”.)
Customer Preferences

NOTE: If you are attempting to match the color scheme of an existing website, there is a color utility called Color Expert at [http://www.abitom.com/](http://www.abitom.com/) for that purpose. In order to use the utility, you must download and install the software on your computer.
